Data Analyst

To give a description of the job role: The candidate will be part of the team implementing software at airlines, leasing companies and maintenance facilities throughout the world. The core responsibilities will be to perform data loading, translation and validation of customer data from their systems into the software. The data may be in Excel, Word and PDF files or will come from a customer database system that we will be required to integrate with. Once the data source(s) have been identified the loading and processing of the data is done by configuring the import tools and working together with the rest of the implementation team and customer to ensure a smooth and accurate load of information.

Functie voorwaarden

Data analyse Receive and verify data processing files from clients Software and database programming skills, processing software that may include MS Access and Excel, MS SQL or other data processing tool Data handling Formatting data Must be fluent in English, possessing excellent written and spoken communication skills. Minimum of 2 years experience in data handling/analysis/mining of data portfolios. Strong analytical, organisational and time management skills; ability to set priorities, complete tasks, and meet strict deadlines Ability to travel abroad when required. Knowledge of, or interest in, aviation is a benefit.
