.Net developer

You will be a key part of the SCRUM development team for our software for doing management and leasing of aircraft and engines that is in use with airlines and leasing companies around the world.

Your responsibilities will be to work closely with the Product/Business Owners and with the rest of the development team to take the requirements and add them to the software and database design. You will also be asked to investigate any bugs and issues reported and work to resolve them with the rest of the team and the Operations department if needed.

Besides the existing software, we are focusing on a couple of web applications offering aircraft (related) information and document management. Image manipulation, security, performance, availability and integration with our existing back ends are important aspects of new development.

KEY ACCOUNTABILITIES

Developer

- Dependable and key member of the development team
- Ability to understand requirements as presented by the Product Owners and ask any questions required for clarification
- Translation of these requirements into software design: Objects, screens, etc.
- Work closely with the rest of the development team(s) to deliver high quality software
- Investigate bugs/issues reported during development sprint

DATABASE MANAGEMENT

- Translation of the requirements into database design

PERFORMANCE INDICATORS

- Job knowledge
