Security Engineer

Your key responsibilities

Together with your squad, you are responsible for implementing IT Security capabilities and delivering security & risk awareness throughout WB Tech. You're familiar with the application environments within WB Tech globally. Preferably you have been a DEV or OPS engineer in order to easily participate various technical (security) discussions and drive the integration of IT Security in the DevOps way of working.

Your main focus will be on the following IT Security capabilities:

- Secure SDLC (incl. code review, requirements setting, security config.)
- Application Security (incl. application hardening, pen testing)
- Server & Endpoint Security (incl. malware protection, HIPS, hardening)
- Network Security (incl. firewalls, malware protection & IDS, segmentation)
- Data Security (incl. DLP, encryption services & key management)
- IT & Sec Risk Assessment
- Drive Control Implementation
- Key Control Testing
- Data Analysis & Reporting
- Manage Third Party & Cloud Security
- Vulnerability and Patch Management
- Security Monitoring & Alert Handling
- Automate and simplify Security & Risk Controls
- Designing technical Security Solutions

We are looking for:

You are an energetic and proactive IT Security professional with a passion for the securing WB Tech environments and a positive, can-do mentality. You are a natural team player who forms relationships based on social skills rather than hierarchical structure. Enhancing the security controls and ultimately make ING safer, is a challenge to you. Close cooperation with and between the DevOps squads is your greatest achievement.

info@olifantconsultancy.nl

You have a broad array of both technical and orange code competences with which you feel comfortable with all WB Tech services *and* know your way around the WB Tech squads globally. You continuously strive to develop both yourself *and* your colleagues in the security mind-set.

You are an ambassador for IT Security around the Globe. This role requires emphasis on the following:

- You have excellent problem-solving skills and are passionate about IT Security.
- You are inspiring and show energy and passion.
- You are capable of implementing one way of working regarding the implementation of IT Security & IT Risk controls across WB Tech countries.
- You have a good feel on how everything works in the international WB Tech organisation and you understand the underlying spheres of influence.
- You are focused on cross border collaboration: you set aside your own 'ego' in the interests of achieving the best results - you help others to be successful.
- You are able to design technical Security solutions

Education and background

- Professional and intellectual IT skills at bachelor or university level, preferably IT Master
- **Extensive experience in both IT Security and IT Risk**
- You have a background in IT engineering area, preferably in Agile teams as a Dev or Ops Engineer
- Track record of consulting/advising
- Certification in and / or proven skills in IT Security and IT Risk (**CISSP is mandatory to have or to obtain within 6 months**)
- Excellent oral and written command of English

Locatie: Amsterdam / Opdracht: Vast dienstverband

Een intakegesprek wordt standaard ingepland alvorens het cv eventueel bij de opdrachtgever wordt voorgesteld, bovendien zal er minimaal één referentie van je gevraagd worden.
