## Data Engineer

### Needed skills & experience

We are looking for someone with an easy-to-work-with, mature and no-nonsense mentality and either a bachelors or masters degree in a relevant field of expertise. Someone who is an open and honest communicator, who values working as part of a team, who is willing and able to coach or train other developers and who is aware of developments and trends in the industry and corporate ecosystem.

*Are you also passionate about a (not so distant) future that most data processing is done with (K)SQL, not scared off by complex data, and occasionally enjoy developing complex components in Java? Then please read on.*

On the more technical side you must have 9+ years of relevant experience in data engineering and especially must have experience in the following fields:

- Agile / Scrum.
- Track record in building larger corporate systems.
- Kafka Sql (KSQL) and the Kafka Streaming API.
- Kafka. Preferably the Confluent framework.
- Data Integration techniques.
- Java backend development.
- Oracle RDBMS 11g or higher.
- Oracle Sql 11g or higher.
- Data modelling.
- Linux (bash) scripting capabilities.

Next to these must haves, we would like you to have knowledge of the following:

- CI / CD tooling: Maven, Jenkins, Sonar, Git, Artifactory, Ansible.
- Database Change Data Capture.
- Visualisation with Grafana, Elastic, Kibana.
- Oracle Data Integrator 12c.
- Experience in a complex, corporate environment.
- Experience in Lending, Financial systems.
- Issue trackers like JIRA, ServiceNow.
- Collaboration tooling like Confluence.

**Locatie: Amsterdam / Opdracht: Deta-vast**

***Een intakegesprek wordt standaard ingepland alvorens het cv eventueel bij de opdrachtgever wordt voorgesteld, bovendien zal er minimaal één referentie van je gevraagd worden.***
